

Example Setup

1) Shuffle and stack all cards face down to form the *Deck*.

2) Draw and place the top card of the deck to form the *Expanse*.

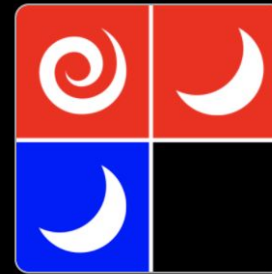

Expanse

3) The first player chooses their color. In this example, they choose to be **red**.

Note: Players can check the number of cards remaining in the Deck at any time.

Card Overview

Each card has 4 quadrants.
A quadrant can be black, red
or blue. Some red and blue
quadrants have 1 of 4 different
icons:

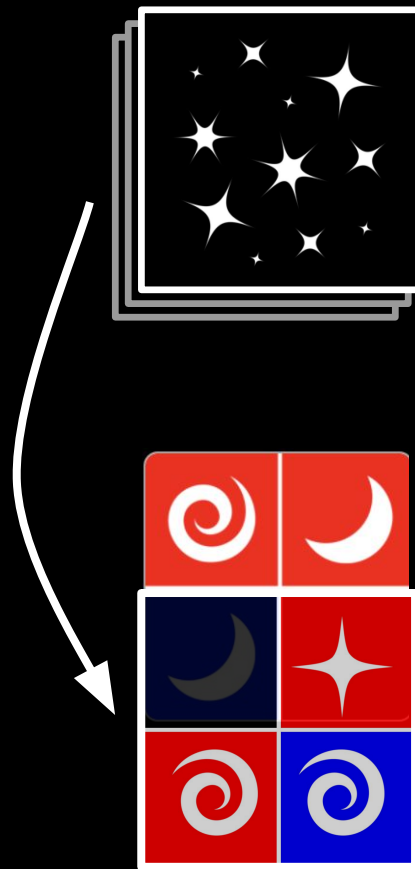

Sectors

A *Sector* is a contiguous group of quadrants
of the same color, and can span multiple
cards. A *Sector* is worth 1 point for each
quadrant, and another point for each **unique**
icon. So far, **red** player has one *Sector*
worth 4 points, which isn't worth scoring yet
since **you only get to score once during a
game.**

Gameplay

On your turn, draw a card and place **it in any orientation** in the *Expanse*. At least one quadrant of the placed card **must** overlap or share an edge with another quadrant in the Expanse. Blue and red quadrants **cannot** directly overlap. A black quadrant **can** overlap any color quadrant, and any color quadrant can cover a black quadrant.

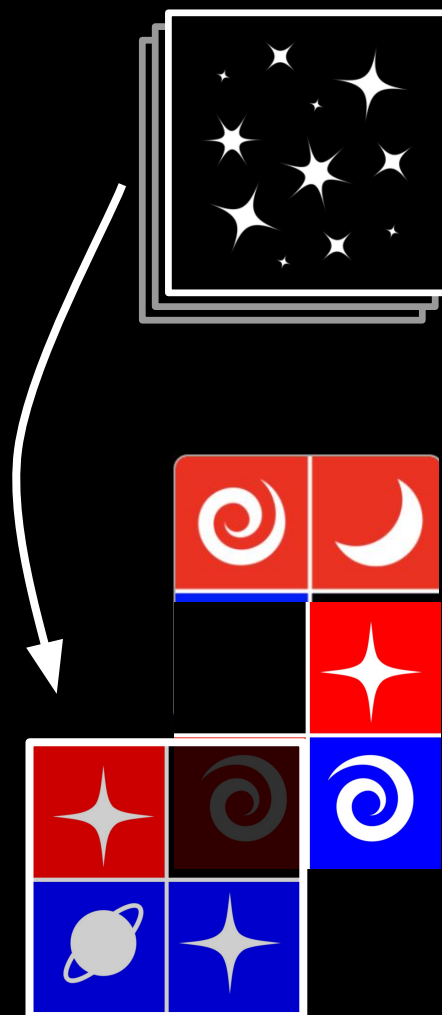

Example 1st Turn

Red player placed their card in a way that expanded their sector.

Example 2nd Turn

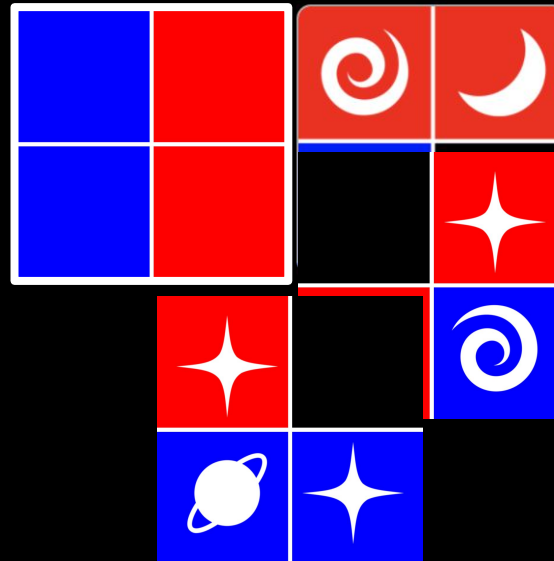

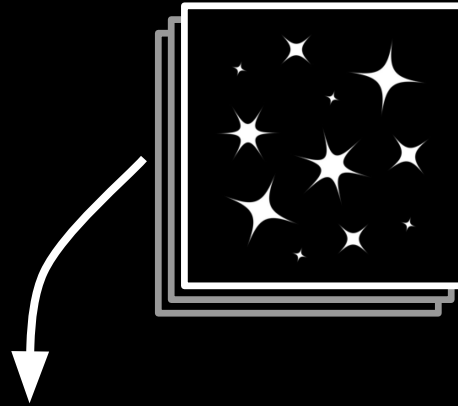

Blue player draws and places a card, which covers up one of red player's quadrants with a black quadrant.

Blue and red player now each have two different sectors. **Red** player's best Sector is worth 6 points, and **blue** player's best Sector is worth 4 points, although neither player has decided to score yet.

Example 3rd Turn

Red player places in a way that connects two of their *Sectors*! They decide to **score** on this turn; this becomes their score for the entire game!

Scoring

Once per game, when you place a card, you may score **one *Sector*** of your color.

A *Sector* is worth 1 point per adjacent quadrant, plus 1 point per **unique** icon in the *Sector*. The game ends when both players have scored a *Sector*, or when the last card has been placed. If players tie for points, the player who scored first wins. In this example, **red** player scored 8 points!
