

Game Setup

- 1) Shuffle and stack all cards face down to form the *Deck*.

Deck

- 2) Draw and place the top card of the deck to form the *Expanse*.

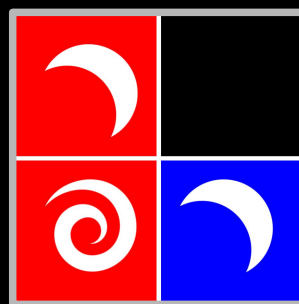

Expanse

- 3) The first player is always **blue**. Once per **game**, they will score their best **blue Sector** (scoring is discussed later).

Note: Players can check the number of cards remaining in the Deck at any time.

Card Overview

Each card has 4 quadrants.
A quadrant can be black, red
or blue. Some red and blue
quadrants have 1 of 4
different icons:

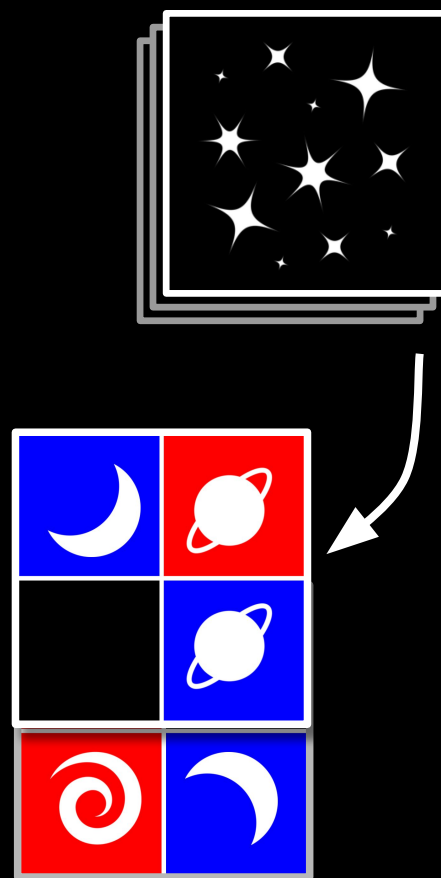

Sectors

A *Sector* is a contiguous group of adjacent quadrants of the same color, and can span multiple cards. A *Sector* is worth 1 point for each quadrant, and 1 point for each **unique** icon. At the start of the game, **red** player has one *Sector* worth 4 points, and **blue** player has one *Sector* worth 2 points.

Sector

Gameplay

On your turn, draw a card and place it in **any orientation** in the *Expanse*. At least one quadrant of the placed card **must overlap or share an edge** with another quadrant in the Expanse. **Blue** quadrants cannot **overlap red** quadrants, and visa versa. Black is useful for covering up your opponent's quadrants.

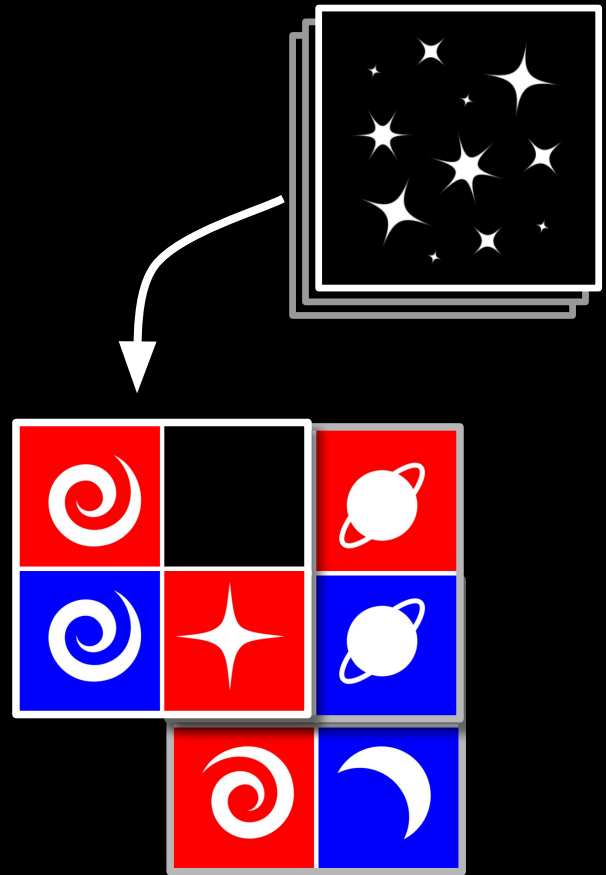

Example 1st Turn

Blue player placed their card in a way that expanded a blue sector and covered a red quadrant with a black quadrant.

Example 2nd Turn

Red player draws and places a card, which covers up a blue quadrant with a black quadrant, and grows one of the red sectors.

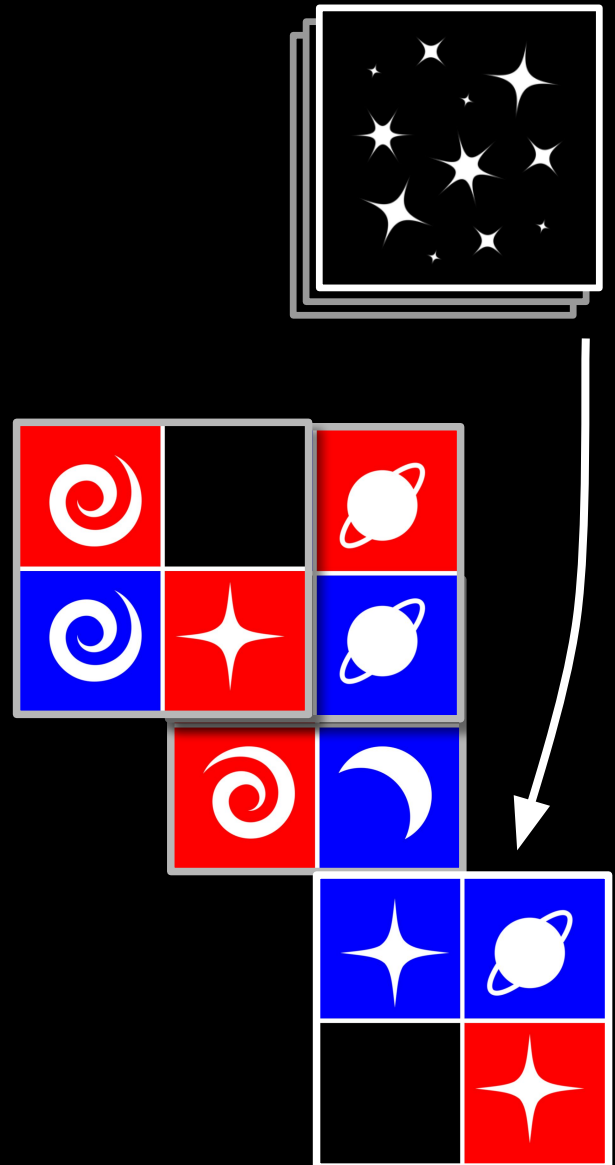

Scoring!

Once per game, when you place a card, you may **score one Sector** of your color. A *Sector* is worth 1 point per adjacent quadrant, plus 1 point per **unique** icon in the *Sector*. The first player to score will win unless the other player scores higher. If you score first, use your future turns to try and block the other player's *Sectors*. The game ends when both players have scored a *Sector*, or when the last card has been placed.

Sector

Example 3rd Turn

Blue player places next to a card in the *Expanse*, and grows their best *Sector* by 2 quadrants and 2 unique icons! That *Sector* is now worth 8 points, which is pretty good, so they decide to score. **Blue** player will win unless **red** player can score at least 9 points on a future turn.

When to Score?

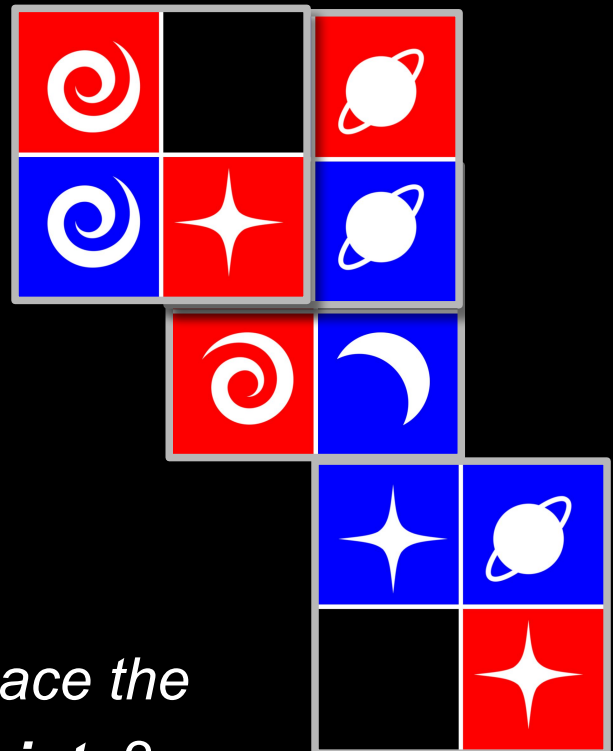

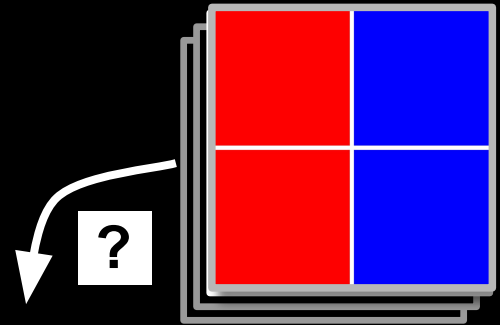

A score of 8 or more is pretty good. Scoring first can give an advantage, since the first player to score wins ties. In addition, the player that scores first can focus on blocking the other player's *Sectors* on future turns.

Sector

Ending the Game

Both players will continue taking turns until **Red** can score **higher** than **Blue's** score of 8 points.

If the last card of the *Deck* is played without **Red** scoring 9 or more points, then **Blue** wins!

Example 4th Turn

? *Where can **red** player place the card they drew to **score 8 points**? Remember, you can rotate the card, but blue quadrants can't be placed on red (and visa versa)!*

Hint: one of the red quadrants on the card you place will cover up a red quadrant already in the Expanse!
